**DESCRIPTION:**

The CARGOCLAMP is a high security seal designed to protect against attempts made to break off container doors.

The CARGOCLAMP blocks not only the container doors but also protects against potential tampering to the door handles, which are also covered by the seal's barrier.

The seal gets positioned over the first door handle and THE CARGOCLAMP gets blocked by a closing bolt seal. Then the other door handle gets covered by the adjustable part of the barrier. The handle gets fixed into place by a closing bolt seal, and in doing so THE CARGOCLAMP also blocks the container doors.
